

JOLT Fulfilment System automates data management tasks so you can run all your sales channels, shipping and inventory from one simple cloud dashboard.

JOLT works with your business' existing framework to add our proprietary JOLT Fulfillment System e-commerce software. Understanding your business' procedures, and the logic that drives those operations, gives us insight into how to achieve successful system integration. We get to know how your business functions, and how our software solution will work in conjunction within the broad scope of your overall business enterprise.

## [CUSTOMIZABLE FEATURES] Manage your data your way.

### Product & Inventory Management and Integration

Manage product information, including details like title, manufacturer, cost, preferred shipping method, weight, warehouse location, and more. Product can also be attached to multiple 'Seller SKUs' and 'ASINs' that are unique for each sales channel, or for multiple Seller SKUs or ASINs within a single sales channel.

### Manage Product Packs/Kits/Modifications

Products can be attached to multiple Packs, Kits, or Modifications sets with personalized fulfillment requirements and notes; and can also have multiple Seller SKUs or ASINs within that Pack, Kit, or Modification.

### Manage Overselling

Monitor and control inventory by sending feeds direct to all your sales channels to avoid overselling.

### Product Information CSV Import/Export Tool

Export product data to Excel, the preferred spreadsheet program, and make changes to multiple products at time before reloading files.

### Order Management

Import orders from all of your sales channels through seamless integration with their designated APIs, or by flat file transfer.

### Customized Packing Slip Generation

Each sales channel can create a unique packing slip to meet specific channel stipulations. The packing slip can also include additional vendor packing instructions and warehouse location details.

### Shipping and Fulfillment Integration

Originate and store labels by integrating with selected carrier's APIs. Popular carriers are easily merged into the application.

### Fulfillment Information Transmission

Send tracking number and order status updates to various sales channels. An additional file for invoicing can be sent, if required by a particular sales channel.

### Order Reporting

Create documents that are customized to vendor requirements based on sales data from integrated channels. Assess product performance for forecasting, so you can manage supply and demand, and customer expectations.

### Customer Service/Return Merchandise Authorization Tracking

Provide better customer service by accurately managing return information, as well as claims by end-users, so you can efficiently process return acceptance when merchandise is shipped back to you.
